

## Cleary Water Sewer and Fire District (WSFD)

Dear Cleary Water Customer:

Cleary Water Sewer Fire District (CWSFD) has obtained financing to replace the existing older, deficient, mechanical water meters in the water distribution system with new ultrasonic cellular water meters. As mechanical water meters age, they lose the ability to accurately measure and record the actual water flow through the meter. This age-related slowdown always under-records the true volume of water being used by the customer. The technology of ultrasonic cellular water meters is a very accurate way to measure water flow through the meter.

Customers could see an increase in their water bill due to the fact the new ultrasonic meters will record the true water usage that the old mechanical meters were under-reporting. These new meters will transmit the usage data, via cellular signal, to CWSFD's office four (4) times a day. Customers will be able set-up an online account to access your water usage data. More information and instructions for setting up this account will come later as the replacement effort commences. This information will also be posted on our website at <https://www.clearywsfd.org> when it is available.

The 2025 Water Meter Replacement Project was competitively bid on December 05, 2025, and a contract was awarded to Hemphill Construction Co., Inc. Construction will begin in mid-March 2026 and is anticipated to be completed by end of May 2026. During construction, customers will encounter equipment and personnel performing small-scale excavations and water meter installations on the county rights-of-way, private roads, and in customer's yards near the existing water meter. Many customers could experience temporary water outages as the contractor changes out the meters. The CWSFD asks for your patience and understanding during this process. CWSFD's customers can look forward to better service and a more accurate recording of water usage upon completion of the project.

Please visit our website at <https://www.clearywsfd.org>, to sign up for future communication plus system alerts via text and email. You can also contact the CWSFD office at 601-845-6375 with any additional questions.
